The bxrockrack V3 by.Effect of p-nitrophenyl glycine on the time course of development of spatial working and reference memory in the rat. A single dose of p-nitrophenyl glycine (p-NP-Gly), 50 mg/kg, was administered to male hooded rats at the age of 21 days. The animals were trained on a modified version of the active place avoidance task or the eight-arm radial maze at the age of 22, 25 or 30 days and the conditioned behavior assessed at various times up to five weeks post-treatment. Treatment with p-NP-Gly reduced the acquisition of the a
